**VI. Data Visualization**

# Introduction

In the era of big data, organizations rely on Business Intelligence (BI) to make informed and strategic decisions. BI combines data warehousing, ETL processes, and data visualization to transform raw data into meaningful insights. By organizing and analyzing data effectively, businesses can uncover trends, improve operations, and gain a competitive edge.

# Objective

## Build a Data Warehouse

Design and create a centralized database to store integrated data from multiple sources in a structured format for analysis.

## Perform ETL

Use Pentaho to extract raw data, transform it into a clean and consistent format, and load it into the data warehouse.

## Extract Insights from Data

Visualize the data to uncover trends, patterns, and key metrics that help support data-driven decision-making.

# Dataset

## Raw Dataset

# Conclusion

Working with Pentaho helps in making visualization and working on data better.

This helps bring in developer and data analyst working better on tools.

# Thank you

Any question?
